Kairat Kaipov
DevOps engineer

kaipovich24@gmail.com
https://github.com/kaipov24

I'm transitioning into DevOps, after over 4 years of work in Frontend Development. I'm learning DevOps tools and practices to strengthen my expertise in automation, cloud platforms, and system reliability.

SKILLS

- AWS, Git, Linux, Docker, Python
- Go, PostgreSQL, MySQL
- JavaScript, React, Next

EXPERIENCE

Remote - *Frontend Engineer (Growth engineering)*

November 2020 - April 2025

-Built and maintained core parts of the marketing website and blog, improving content structure and user engagement

-Contributed to CMS migrations: from a static site to Prismic for dynamic content management and from Prismic to Contentful to enable scalable, flexible content workflows

-Developed reusable, responsive HubSpot email templates for global marketing campaigns and A/B tests

-Automated Document Export Tool – Developed an internal Node.js API using Puppeteer to generate PDFs from dynamic tools, enabling teams to automate report generation

-Implemented localization across UI components and content areas to support multi-language experiences and international expansion

-Took part in building a design system from the ground up, delivering consistent, scalable UI components aligned with brand and accessibility standards

-Enhanced accessibility by developing components that are compatible with keyboard navigation and screen readers

EDUCATION

EPAM Campus *Cloud & DevOps*

August 2025 - October 2025

Kyrgyz-Russian Slavic University *B.A. in International Relations*

September 2012 - June 2016
